

(Lecture)  
12F

How to prefer which variable  
by using function of "this ->"

just write "this ->" before variable  
to show compiler to prefer b/w two  
variables with same name.

### Example Program

```

class Example
{
    int x;
    public:
    Example (int x)
    {
        this -> x = x;
    }
    void display ( )
    {
        cout << "x = " << x;
    }
};
}i

```

---

```

int main ( )
{
    Example E(50);
    E.display ( );
    getch ( );
}

```
